Programming, data structures and algorithms using python
GitHub Foundations
GitHub Actions
GitHub Administration
AWS Certified Cloud Practitioner

Jay Patel

Java Backend Engineer @ TCS | • Apache Beam Spring Boot •
Microservices • Cloud-Native (GCP/AWS)
Ahmedabad, Gujarat, India

Summary

35M+ financial records. That's how much data flows through the distributed backend systems I've built in production at Tata Consultancy Services — with zero tolerance for downtime in risk-analysis pipelines that decision-makers depend on daily.

I'm a Java Backend Engineer with 2+ years at TCS, specialising in building microservices, high-throughput REST APIs, and cloud-native platforms on GCP that solve real data-scale problems in the financial domain.

What I've shipped:

- Risk-Based Pricing Analytics Engine — distributed Java + Apache Beam pipeline processing 35M+ records
- Reactive backend services using Spring WebClient & Project Reactor for concurrent financial workloads
- Secure enterprise APIs with OAuth2, SSL/TLS and RBAC, integrated across cloud decision platforms
- CI/CD automation via Maven & Nexus, cutting deployment friction for production-grade systems

My stack: Java · Spring Boot · Apache Beam · GCP (Dataflow, BigQuery, Pub/Sub) · Microservices · REST APIs · SQL · Docker · GitHub Actions · OAuth2

I'm currently exploring backend engineering roles where I can go deeper on distributed systems, event-driven architecture, and cloud-native infrastructure — ideally on problems with real scale and complexity.

AWS Certified Cloud Practitioner · GitHub Actions Certified · Open to on-site, hybrid & remote opportunities.

Experience

Tata Consultancy Services

Java Software Engineer

September 2023 - Present (2 years 10 months)

Ahmedabad, Gujarat, India

Architected and shipped Java microservices using Spring Boot handling high-throughput financial data processing, integrated into a production system serving risk-analysis pipelines at enterprise scale.

Built distributed Apache Beam pipelines processing 35M+ financial records, leveraging memory-efficient aggregation and parallel computation to handle large-scale credit risk datasets.

Designed and implemented secure REST APIs enabling real-time integration between enterprise decision platforms and cloud services — authenticated via OAuth2, SSL/TLS, and RBAC.

Developed reactive and asynchronous backend services using Spring WebClient and Project Reactor, improving concurrent workload handling for high-frequency financial operations.

Deployed cloud-native backend infrastructure on GCP (Dataflow, BigQuery, Pub/Sub), enabling scalable data ingestion and real-time analytics for financial reporting.

Automated CI/CD pipelines using Maven and Nexus, reducing deployment errors and standardising the release process across production microservice environments.

Implemented IAM policies and role-based cloud access controls, securing backend systems against unauthorised access across multi-service distributed architectures.

Tata Consultancy Services

Assistant system engineer trainee

January 2023 - May 2023 (5 months)

Gandhinagar, Gujarat, India

Completed intensive backend engineering training in Java, Spring Boot, and enterprise software development practices within TCS's developer onboarding programme.

Built foundational knowledge in REST API design, relational databases, and software architecture patterns applied to enterprise-grade systems.

Transitioned directly to full-time Java Software Engineer role following successful completion of the training period.

Education

LDRP Institute of Technology & Research, Gujarat Technological University

Bachelor of Engineering - BE, Computer Engineering · (August 2019 - April 2023)
