

Advertisement No : C-DAC/BLR/02/2026

Application ID : 623641

Applying for : [Project Associate - Software Development](#)

Salary : Min. CTC - Rs. 3.6 LPA to Rs. 5.04 LPA (Candidates with higher experience within the given bracket will be offered higher salary as per policy)

Exam Centre Preference: **Pune, Mumbai, Bengaluru**

Mr. Patel jaykumar Riteshbhai

s/o Riteshbhai & Bhagvatiben

Male
28/12/2001, Age - 24
single

Current Address

J102, Shukan Eye, nr. reliance circle, Kudasan,
Gandhinagar,Gujarat-382421

*** Category**

Caste:
General

Location

Preffered: **Bangalore**

Open for other locations: **Yes**

Employment Details

Are you employed in any Govt./Semi-Govt./PSU/Autonomous Bodies?: **No**

Are you an Ex-service Personnel?: **No**

Are you employed in C-DAC?: **No**

Professional Qualification

Qualification on the basis of which the application is made (Essential Qualification)

Preferred Domain: Computer Application/Software Development | Software Development | Software Technology (Web technologies)

B.E/ B. Tech - Bachelor of Engineering, Computer

65.03%

University: Kadi Sarva Vishwavidyalaya

Passing Year: 25/04/2023

Paper Publications and Presentations(Only 500 Words):

During my tenure at Tata Consultancy Services, I have actively contributed to technical knowledge sharing within professional and team environments. I prepared and presented internal documentation on designing fault-tolerant, scalable ETL pipelines using Apache Beam and Google Cloud Dataflow, capable of processing 35 million plus financial records. The documentation covered key architectural decisions around windowing strategies, PCollection transformations, and side inputs - helping the team adopt production-grade pipeline design patterns. I also conducted informal technical sessions for team members on topics including Spring Boot microservices architecture, Project Reactor for reactive programming, OAuth 2.0 token flow with Spring Security, and GCP service account impersonation with bucket-level IAM permissions. These sessions directly improved team onboarding speed and code quality on cloud-native Java projects. In the DevOps space, I documented CI-CD pipeline designs using GitHub Actions for automating build, test, and deployment workflows. These documents were adopted as reference templates within the team. Prior to my current role, during my work in automotive embedded systems QA at TCS on the BOSCH-ADAS client, I contributed to technical QA reports and test documentation covering C-Sharp based test automation frameworks for Advanced Driver Assistance Systems. These documents were reviewed and used by cross-functional engineering teams across project cycles. My experience spans both writing and presenting technical material - from low-level embedded QA documentation to high-throughput cloud data pipeline architecture. I am currently working on publishing technical articles focused on GCP Dataflow optimizations and reactive microservices patterns, drawing from real production experience.

Significant Achievements in the career which may support your candidature:

Designed and implemented Apache Beam - GCP Dataflow pipelines processing 35 million plus financial records in a production banking domain workload at TCS. Ensured fault tolerance, exactly-once semantics, and optimized throughput across large-scale data processing runs. Implemented GCP service account impersonation with bucket-level IAM permissions and integrated Google Cloud KMS for encryption key management - ensuring regulatory-grade data security for sensitive financial data pipelines. Built production-grade OAuth 2.0 secured REST APIs using Spring Boot and Spring Security, deployed in cloud environments serving real business workflows. Successfully transitioned from Automotive Embedded Systems QA (C-Sharp, ADAS - BOSCH client) to Cloud Data Engineering - demonstrating strong self-learning capability and adaptability across technology stacks and business domains. Earned industry certifications including AWS Certified Cloud Practitioner, GitHub Actions, and GitHub Foundations - reflecting commitment to validated, standards-based cloud and DevOps knowledge. Developed expertise across the full backend stack - Spring Boot microservices, Project Reactor for reactive programming, GCP services (GCS, KMS, Cloud Logging, Dataflow) - making me effective across both application development and data engineering workloads.

Associations and Affiliation with Professional Bodies:

AWS Certification Program - Certified Cloud Practitioner (Amazon Web Services). This certification validates foundational knowledge of cloud architecture, security, and core services, applicable across multi-cloud and hybrid enterprise environments. GitHub Certifications - Certified in GitHub Actions and GitHub Foundations. These reflect active engagement with industry-standard DevOps practices, CI-CD pipeline design, and collaborative software development workflows used across modern engineering teams. Google Cloud Developer Ecosystem - Engaged through hands-on production work with Dataflow, GCS, Cloud KMS, and Cloud Logging. Regularly follow Google Cloud published architectural best practices, release documentation, and developer community updates. Apache Beam Open Source Community - Active follower of Apache Beam SDK updates, roadmap discussions, and official documentation. Internal adoption of pipeline design best practices at TCS has been directly informed by community standards and Apache Beam release notes. Spring and Java Developer Community - Regularly engage with Spring official documentation, Project Reactor guides, and established Java developer resources as part of ongoing professional development and keeping skills current with evolving backend engineering standards.

 Permanent Address

79, Bhaktinagar-2 Society, Meghpar Kumbhardi, Anjar, Gujarat-370110

 Work Experience

Total Work Experience: **2 year(s) 8 month(s) 24 day(s)**

Total Qualifying Experience: **2 year(s) 8 month(s) 24 day(s)**

Current Employment

Tata Consultancy Services

Designation/Grade: **System Engineer**

Responsibilities: Design and maintain end to end data processing pipeline using Java and Apache beam using GCP ecosystem

28/09/2023 To 20/06/2026

₹ 4 LPA

 Skill Set

Skill	Months
Java	12
Spring boot	12
Jenkins	12
Data structures	12
Maven	12

Other Areas of Expertise (Technology / Domain Skills):

Languages: Java Backend APIs: Spring Boot, Spring WebClient, Project Reactor, REST APIs, Async HTTP, Concurrent Distributed Processing Data Processing: Apache Beam, Google Dataflow, Batch Processing, Large Scale ETL Security: OAuth 2.0, JWT, Spring Security, RBAC, Google KMS, Service Account Impersonation, Authorization Databases: PostgreSQL, MySQL, JPA, HashMap Based In Memory Optimization Cloud and DevOps: GCP (GCS, Cloud Logging, Dataflow, KMS), AWS, Docker, Maven, Jenkins, CI CD, GitHub Actions, Git
